DETAILED ACTION

This application is in condition for allowance except for the following formal matters:

Drawings

Figure 5 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Abstract

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The

Art Unit: 2877

abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

For this application, the abstract has more than 150 words.

Specification

The disclosure is objected to because of the following informalities:

Specification, page 22, line 1, the element 3a is not in the drawing.

Allowable Subject Matter

Claims 1-7 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: Prior arts of record do not disclose a foreign substance inspection apparatus. The apparatus comprises: a liftably supported lift member inside a container; a drive control device for controlling rotation of the container and rise and fall of the lift member; a scraping member provided with a scraping part and disposed on the opening surface of the container, wherein the powder material contained in the container is pushed upward with the rise of the lift member so as to be scraped with the scraping member, the imaging device is located so as to obtain images of the surface of the powder material that is exposed on the opening surface of the container which structurally arranged and functionally operated as claimed in claim 1.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
